DENTAL

Your story is your smile.

CLINIC

THE NEW GENERATION OF DENTISTRY

We are located in the middle of the city, in Mahall, Ankara which is the new healthcare center of the city.

We established Piano Dental Clinic, beyond the dental clinics you know, with the latest technological equipment reached by the developing digital world.

Join us to celebrate your smile together

ALL YOUR NEEDS FROM A SINGLE POINT

We meet all your needs for oral and dental health and aesthetics at a single point, from children to advanced ages.

By offering a comfortable, stylish and pleasant environment from the first moment you enter, Piano Dental Clinic has been designed as an atmosphere that combines modern dentistry with expertise.

The latest technologies used in dental health are preferred for your treatments performed by specialist physicians.

Expertise combined with comfort.

Your story is your smile.

Dentist / Prosthodontist Specialist

She graduated from the Hacettepe University Faculty of Dentistry.

She completed her specialty education at the same university with the thesis on "In-Vitro Examination of the Biomechanical Relationship Between Ti-Zr Alloyed Dental Implant and Different Abutment Materials" in the field of Prosthetic Dentistry.

She has attended to many seminars and congresses on dental implants and aesthetic dentistry, published scientific articles, wrote articles in journals.

She founded Piano Dental Clinic in line with the trainings she received and gained clinical experience.

Dr. Dt. Hatice Özcelik

Dentist / Pediatric Dentist

Tugce Talay, born in 1987

He graduated from Hacettepe Faculty of Dentistry in 2012.

He completed his specialization in Gazi University Faculty of Dentistry, Department of Pediatric Dentistry, with the thesis on "Evaluation of the relationship between the prevalence of candida albicans and non candida albicans isolated from saliva and the level of caries".

He attended and continues to participate in congresses and trainings on pediatric dentistry and restorative treatments.

After working in the government and in a few private clinics in Ankara, he joined the Piano Dental Clinic family.

Dr. Dt. Tuğçe Talay

*Dentist / Oral, Dental and Maxillofacial
Surgery*

Born in Diyarbakır in 1989, Er completed his high school education at Ankara Atatürk Anatolian High School and entered Hacettepe University Faculty of Dentistry. After her graduation in 2012, she started to receive specialization training on Oral, Dental and Maxillofacial Surgery in 2012.

In 2016, he gave his specialization thesis titled "Examination and comparison of the clinical and radiological (Computerized Tomography) success of "FLEXBONE®?" and "MONO CORTICAL®?" graft materials applied using the tunnel technique in atrophic mandibular crests planned to be implanted". The scientific meetings and activities attended by Er, who has been working in the private sector since this date, in line with the training and clinical experience he has gained, are as follows;

ITI (International Team for Implantology)Türkiye Congress, 2013-2014-2019
24.European Association of Osseointegration Scientific Meeting- Stockholm,Sweden-2015

Dr. Dt. Hande Isıl İmamoğlu Er

OUR PRIORITY IS TO MEET YOU

THE FIRST CLINICAL EXAMINATION
IS FREE OF CHARGE

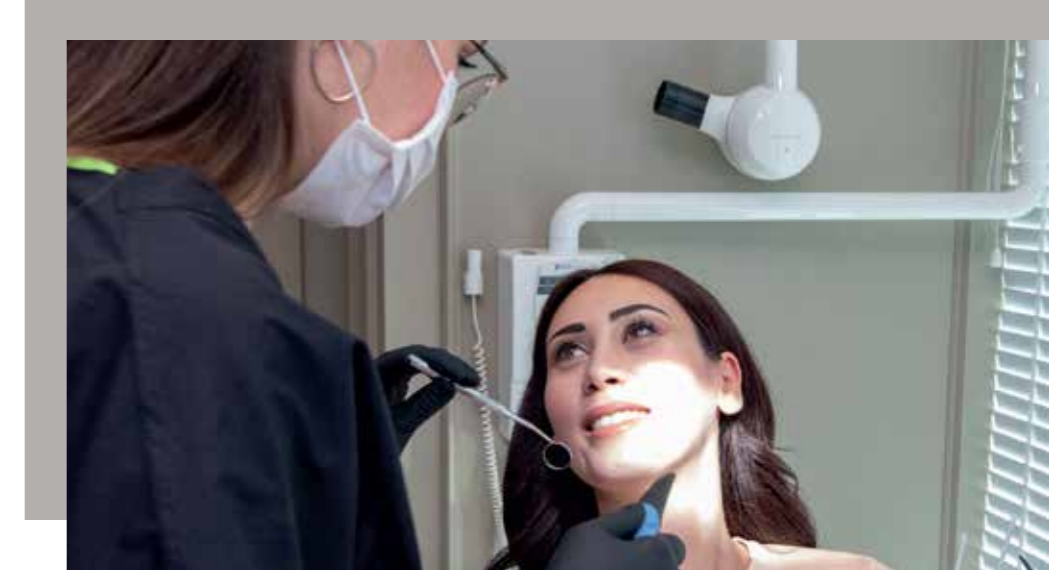

Our first clinical examination
at Piano Clinic is free of charge.

WHY?

Bizim için muayene, öncelikle sizinle tanışmak ve sizi doğru bilgiyle buluşturmak demektir. Bunun için tedavi öncesi tanı ve teşhis için yapılan klinik muayene, radyografik filmler, tedavi planlaması dahil her işlem ücretsizdir.

*We care about our patients
and want them to take
an active role with their
physician when deciding on
the treatment plan.*

We start your treatment by understanding you.

*The aim of Piano Dental
Clinic is to provide
quality service with
trust, respect, ethical
values, technology and
science, accompanied by
smiling, understanding
and empathy.*

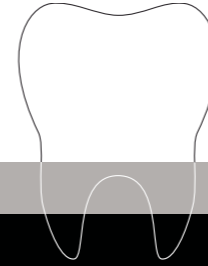

TO MAKE YOU
FEEL GOOD...

Bistro & Kitchenette

A Good Coffee Is Always a Good Idea.

We organized a nice area to welcome you in an environment that you will enjoy and also because you cannot eat anything for a while after the treatment. We are happy to offer you coffee and tea, as well as the snacks we prepare daily in our kitchen.

*Everything is
homemade and
fresh in the
Bistro.*

PIANO

EVERYWHERE IN THE
CLINIC IS SPECIAL
FOR YOU.

RELAX, TAKE A BREATH...

*Disposable,
Correct Care for a
New Breath*

*Hygiene and cleanliness are
priority for health*

You may not be prepared for your appointment at any time. You may feel the need to brush your teeth when you come to our clinic after a meal or meeting or after a consultation and having a snack in our bistro. You can do your oral cleaning with our disposable toothbrush, toothpaste, mouthwash and hygiene products before your appointment and after your treatment.

Playground

We have a very special room for your loved ones

*Children can
also be happy
at the
dental clinic.*

Our children may not want to be treated for reasons such as hospital, clinical environment tension, fear or treatment anxiety. Piano Dental Clinic has been designed to make you feel comfortable at home. In such a clinic, the comfort and convenience of our children are also very important to us. For this reason, we have prepared a playground that our children will love so that they can both relax and feel good before their treatment and have a pleasant time while you are being treated.

*While we take care of
your health, we have
designed a pleasant
playground for children
so that they will not get
bored.*

THE BEST GIFT KNOW IS

A BEAUTIFUL SMILE

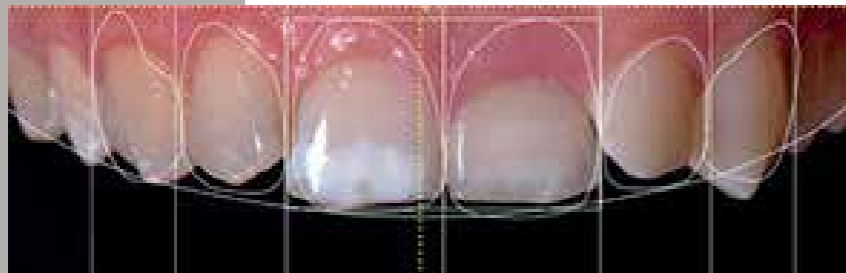

AESTHETIC DENTISTRY

Smile design is the evaluation of the relationship between the aesthetic elements such as the anatomical structures of the person, lips, gums, teeth separately and with each other, and the design of the personal smile that emerges through detailed aesthetic analysis. With the smile design, a healthier and more aesthetic smile is provided to the person.

Healthy teeth and a beautiful smile bring you a miracle in every moment of life.

Before

After

SEEING IS BELIEVING.

In our clinic, we can offer you the potential results of the treatment with the smile design application by making 3D scanning with the 3Shape intraoral scanner.

*You can meet your new smile in minutes without ever touching your teeth.
You can start your treatment with your mind at peace by seeing the result.*

NATURAL TEETH AND NATURAL SMILES WITH SMILE DESIGN

*Laughing
will be
good on you.*

Digital Dentistry

We know that your time is valuable.

Dentistry is becoming more and more digital, treatment times are getting shorter, and the margin of error is also decreasing.

In our clinic, all treatments, from the simplest filling to advanced prosthetic restorations, from orthodontic treatment to implant applications, are performed with the 3Shape System. The system saves you from traditional, painful and long treatment processes.

*Natural result with high technology,
in a short time and with less cost.*

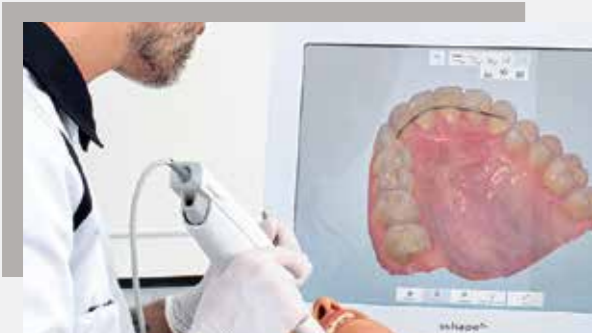

What is 3Shape?

3Shape is a leader in scanning and software solutions for dental applications and is a multi-award winning system that has revolutionized dentistry by developing innovations that provide superior treatment for patients.

*3D Scanning
Treatment
Simulation
with 3Shape*

Digital Workflow

DIGITAL METHODS, QUICK SOLUTIONS.

Digital design

Modeling and design is made for the most appropriate treatment method in computer environment

Digital production

By starting the production in accordance with the design, you will have your teeth in a short time.

Digital scanning

Your teeth are transferred to the digital environment.

Teeth Whitening (Bleaching)

Office bleaching is teeth whitening performed in sessions by the doctor in the clinic. It is applied by activating the high concentration whitening agent with an LED light source. Results are achieved in a short time in bleaching sessions that take about 30- 45 minutes. At the end of the session, at least 2 color tones of whitening in the tooth color is obtained.

The whitening process applied in the correct procedure does not cause any harm to the teeth. The whitening process is the bleaching of teeth with the help of a chemical agent, it does not involve any mechanical application on the tooth.

Permanent whiteness in one session

With the office type opalescence bleaching system used in our clinic, you can achieve permanent whitening in one session.

Dental Implants

Painless, easy placement

Fixed tooth in a day

Lifetime Warranty

Why Dental Implant?

- *It is the most natural and successful treatment of missing tooth.*
- *It offers a permanent solution with high success.*
- *This ensures a firm and reliable fixation of the prosthesis.*
- *Implants support prosthetic teeth that look and feel natural.*
- *It helps to protect the natural jawbone and therefore the facial structure.*
- *This eliminates the cutting of healthy adjacent teeth required in bridge treatment*

Easy and Safe

In Piano Dental Clinic, Swiss origin Straumann and Germany origin Medentika implant systems are used, which offer a lifetime warranty certificate with a high success rate.

In our clinic, bone analysis is performed on the same day with 2-dimensional and 3-dimensional imaging methods, and your prosthesis (your tooth), which is easier than tooth extraction, is completed. Thus, in ONE DAY, you will get your fixed teeth.

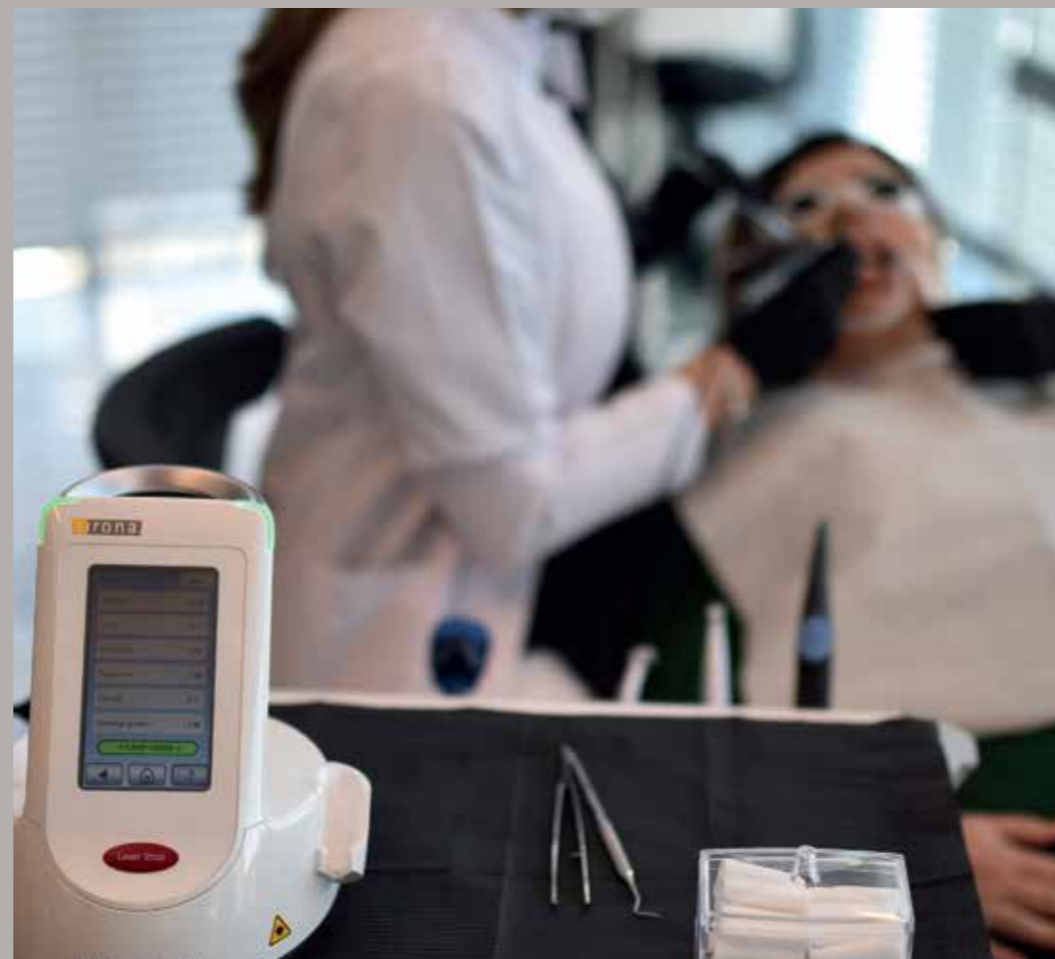

Painless Injection

We prefer painless injection method for our patients. With this method, the anesthetic solution is applied according to the tissue pressure of the person. It is completely safe and effective.

In this method, the gingiva in the area to be anesthetized is anesthetized with a special gel and then the anesthetic solution is given to the relevant area according to the tissue pressure. Thus, the feeling of pain caused by pressure does not occur because the pressure decreases.

PINK AESTHETIC AND NATURAL SMILES ON GUM

Gum Aesthetics

Gum aesthetics is a treatment, also known as pink aesthetics, that brings teeth and gums to the standards they should be by correcting the recession and asymmetric disorders in the gums. The treatment of gum disorders that negatively affect our social and professional life is among the most preferred applications recently. Gum aesthetics can be applied to everyone.

Fast recovery without scar.

In our clinic, we use soft tissue laser in gum treatments. The use of laser reduces post-procedure pain and medication use, there is no bleeding, recovery occurs faster and it leaves no scar.

*Being treated is
like a new game for kids.*

First, playtime

*We prefer to be your child's friend at
the first visit. We become their new
playmate for them to have fun.*

Our treatment is fun

*With our doctor who makes the
treatment fun, your child decides
to be treated as soon as they feel
comfortable and happy*

Brave Heroes & Healthy Teeth

*At the first stage, if your child leans towards to the treatment,
we plan for the application. If your child does not want to be
treated, we request a meeting again when they feel well. In
case of recurrent reluctance, treatment can be carried out
under sedation with the joint decision of the physician and
the parent.*

Sedation in Pediatric Dentistry

Who to apply sedation?

It can be applied to all children with the joint decision of the physician and the parent.

All dental treatments that we do to our children in our clinic can be performed under sedation.

Sedation is applied by our experienced anesthesiologist, dentist and their team.

Traditional & Digital Orthodontics

Digital dentistry tools are also used in orthodontics. Before orthodontic treatment, plaster models of the lower and upper jaws of our patients were made both for archival purposes and to create a treatment plan. With digital dentistry, these models are now obtained in a virtual environment with 3D scanning.

No More Braces

INVISALIGN (Transparent Plate) Treatment

Invisalign treatment, the orthodontic treatments without braces, is literally a product of digital dentistry. Jaw measurements taken by digital scanning are sent to laboratories. Invisalign treatment planning is done entirely on a digital system, transparent plates are obtained from models created with 3D printers.

Enjoy your re-arranged teeth without measuring or wearing braces.

Botox Application

With botox applied by dentists who know facial anatomy very well, successful results are obtained in the treatment of aesthetic and functional problems such as gummy-smile (gum smile), bruxism (tooth clenching) or jaw joint disorders.

The effect duration of box treatment is around 4-6 months. The duration of effect varies from person to person. Age and condition of the applied area affect this period. Almost everyone, except pregnant or breastfeeding women, can have botox procedure.

Young Smiles, Young Looks.

YOU ARE
PROTECTED IN
PIANO'S
VERY CLEAN,
HYGIENIC
AND RELIABLE
ENVIRONMENT.

We are sensitive to
Sterilization

*We care about hygiene
and sterilization as we care about your
health.*

Hygiene in Piano

Our hygiene formula is to be safe, clean and fast.

Our aim in hygiene and sterilization is to protect our patients, ourselves and our loved ones.

For this purpose, it is our responsibility to ensure the hygiene and safety of each of our guests at Piano.

Hygiene starts from the first moment our guest enters the clinic. Air circulation is provided with high filtration filters in all areas of Piano such as clinic, waiting room, x-ray room, children's room and there is a fresh air blowing and suction system.

In all our treatments, in order to reduce the microbial load in our patients, mouthwash with appropriate oral disinfectants is applied before the treatment and this is repeated frequently during the procedure.

In our clinic, all dental instruments that are used with the patient are first kept in a biguanide-based disinfectant solution and then passed through an effective mechanical cleaning, which is the first step of sterilization, performed by hand and ultrasonic device, in order to purify the residues on it. The tools that have been cleaned are dried and packaged in disposable sterilization bags to be opened specifically for the patient. The packaged tools are then sterilized in a device called autoclave using 121 pressurized steam sterilization method.

The sterilization of our rotating-headed instruments such as aerators, micromotors, handpieces, contra-angle handpieces is also carried out in a device called DAC Universal, which lubricates and maintains the instruments at the same time without human intervention.

After each patient, the clinical environment is prepared for the next patient.

- * Disposable cups, suction (saliva absorber), cotton, articulating paper, gloves, masks, napkins etc., which are special for each patient, are thrown into the medical waste bin.*
- * The hand tools used are collected in a box and kept in special disinfectant solutions before sterilization.*
- * All surfaces are disinfected with surface disinfectants with a wide spectrum of action and alcohol content.*
- * Cleaning is done from the clean area to the dirty area. Disinfectant is sprayed on surfaces such as unit table, reflector arm, air-water spray and heads and each is cleaned with separate gauze patch.*
- * The inner surface of the spit basin is washed with bleach prepared in a suitable concentration and a brush. The area around the basin is wiped with disinfectant gauze patch.*
- * Bleach and special disinfection solutions prepared at appropriate concentrations are used to clean the suction and aspirator hoses.*
- * The patient chair and armchairs are wiped with a disinfectant pad.*
- * The clinic is ventilated.*

These procedures are repeated after each patient.

Disinfection of the clinical environment is provided at regular intervals with the sanitation process in Piano. In this process, thanks to the particle size of the sprayed disinfectant being 5-8 microns maximum, high-level results are obtained by showing a homogenized spread and effect on all areas and surfaces.
